DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 6/29/2007 has been entered.

Response to Arguments

Applicant's arguments, filed 6/29/2007, have been fully considered and are persuasive. The previous rejections have been withdrawn.

Allowable Subject Matter

Claims 1 and 4-8 are allowed. The following is an examiner's statement of reasons for allowance: Robinson as modified by Croson teaches the microwave generator according to claim 1 however neither Robinson nor Croson teach or render obvious the further limitations to require self-triggering discharge spark gaps wherein

when one of the discharge spark gaps is switched through first, it is not the case that all other discharge spark gaps are also already triggered but the other discharge spark gaps only by virtue of their individual response characteristic are respectively switched through, leading to uncorrelated initiation of discharge currents. At least this further limitation to claim 1 is not taught or rendered obvious by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Leek (U.S. Pat. No. 7,110,500) teaches a similar pulse forming system with similar connected circuitry.
